

VIDEO WALL SOLUTION

Race Wall Optus Stadium

R-Group assisted in the installation, programming and commissioning of a fully controlled and customisable video wall through an HDMI over IP solution. This approach provided an economical yet robust solution in the video distribution sector.

This was complimented with a state-of-the art audio distribution system within the outlet at Optus stadium.

RGI assisted with the installation and configuration of the 3 x 4 panel, the multicast system and programming alongside AV partner to display the varied sporting content to customers. The control interfaces were developed in consultation with the customer to ensure requirements were met. The control system will allow the end user to select from a variety of preset video wall configurations bespoke to their needs.
